
Cannot randomize and limitate number of questions

Posted by visionweb - 2008/11/03 04:35

I have some new problems:

1. I marked the quiz to randomize the questions, but I have applied it many times and it always is the same order.
2. I specified 10 as count question, but it always shows the 40 questions I captured.
3. Before the last question (39) it showed "31 of 40" (instead of "39 of 40").
4. The spent time is showed as "9 h 2 min 41 sec", when I spent over 5 minutes.

Please help, I have to finish this job for tomorrow!!!!

Thanks

1. We have verified on your server and the functionality works fine. Maybe there was the following scenario for you: you created quiz, started it and have not finished (For example: you have closed browser or loaded another page). Then you edited the quiz and set randomize to true. Then you went back to quiz and continued to pass it. In this case the old order of questions will remain in this quiz. If you finish this quiz and start passing new one questions will go in random order.

2. Yes, there was a bug. We have fixed it. Please download 2.1.5 of ARI Quiz component in member area. Then uninstall old and install new version of component. All data in your database will remain untouched.

3. Maybe there was the following scenario for you: on question #31 you pressed skip and then passed through the end of quiz. Then you should be brought back to question #31. Since you answered all other questions except #31 you will get back to it in the end and will see its order number. Is it possible that you have acted like in this scenario?

4. Could you please verify start and end date/time of passing quiz? It looks like you have started quiz, did not complete it and got back to it in 9 hours.

We had a look at your ARI Quiz installation and it should work fine. Please install updated version of component to fix the second issue. All other things should work without a problem when you start passing new quiz.
