
how to add custom fields for user details?

Posted by oloccina - 2013/07/15 11:13

Hello,
I'd like to add some custom fields for user details
asked before the quiz start (currently name and e-mail are the default fields)

you already told me that this is possible by modifying an xml file, could you
please point me out which file exactly and also suggest the syntax to add more fields
(I want to add text and select fields)

Thank you,
Nic

Hello,

See \components\com_ariquiz\models\forms\quizform\guestform.xml file.

Use the following code to add select element:

Option 1
Option 2
Option 3

Regards,
ARI Soft

thank you,
and how can i have those filed values visible for each user in "quizzes results" page in backend?

also how to make some fields required?

I have to add strings below this line

in this form

?

Nic

It is necessary to add validator(s) to section if you want to do some fields required. Send your XML file by email and specify what field(s) do you want to do required so we can say what validators are necessary to add.

It is possible to use predefined variables in text templates to show extra fields at the end of a quiz on frontend or send

them in email. The extension doesn't show them on backend.

Hi Ari Soft,

I need a third free-text field with the same 50 character, called 'ID', as the required field along with the UserName and the email fields meaning validator is needed.

I also need this field to be able to be printed as part of the the results of all of the quiz, and it's available when the historical results are visited.

Can you please send me those files (xml, validators, result page and other necessary codes)? Appreciate that!

(By the way, I'm using the latest paid version Ari Quiz 3.4.12)

HWG

Hello,

This topic is about "ARI Quiz" extension. "ARI Quiz Lite" doesn't support this ability.

Re:how to add custom fields for user details?

Posted by admin - 2013/12/05 09:16

See \components\com_ariquiz\models\forms\quizform\guestform.xml file. Values from the form can be used into text and mail templates in the following way:

{ \$ExtraData:FIELD_NAME }

Where FIELD_NAME is name of field. If you want to show these fields in quizzes results data grid, it requires modification of the extension.

Regards,
ARI Soft
