
pre-sale question: result based on score range

Posted by mitchie - 2013/11/10 11:41

Hi,
can this script (in some way, even with a plugin) accept all "true" answers giving the appropriate result based on score range, say from 0 to 10 points the result is blablabla, from 11 to 25 points the result is blebleble, from 26 to 53 point the result is blublublu and so on?
thanks in advance,
mitchie

Hello,

It is possible to show different text templates based on earned score in percent. For example from 0 - 10% is used one template, from 10% - 36% is used another template and etc. It is possible to use different text, print, certificate and mail templates.

Regards,
ARI Soft

Hi,
thank you so much for your quick reply.

Unfortunately it is not useful in my case as my tests are not based on same answer percentage (%a %b %c and so on). Could you please quote me by mail a plugin (in order to don't edit the core script and be able to upgrade it) for AriQuiz (not AriQuiz Lite)?
Thanks in advance,
mitchie

Hello,
I'm recovering a site crash and I'm unable to find the plugin you developed for me based on this request. Would you be so kind to supply a copy of it?
Thanks in advance!

Thanks a lot! I lost one day looking for it in all my hdisks... without success.
Thank you so much!
