
License Key problem

Posted by bodyworks - 2008/11/19 20:13

I think I made a similar mistake as another user- when requesting the license key, I added a subfolder that we have not yet created and now have no functionality for the component. I put in a "/ari" after our site name, when I should've just used the site alone. Can I get another license key to reset this?

Sure.

We've deleted incorrect license key. Please generate correct one in member area.

But please be careful when you will generate full license key (it will be soon when you payment is approved).

Regards,
ARI Soft
