
ARI Quiz themes

Posted by evga99 - 2016/04/15 13:19

Why if I copy folder with default theme (.\components\com_ariquiz\themes\default\) to another folder (.\components\com_ariquiz\themes\light\) and after set it (Light) theme in ARI Quiz settings ("Default theme" parameter), when you call the plugin from front-end it will gives an error 500?

Hello,

It seems a new theme is implemented incorrectly and a PHP error occurs. Check PHP error log on your server or send your theme by email so we can investigate the problem on our test server.

Solved.
This happens only if you name the template (folder) "light", with other names there is no such a problem

It seems this a problem with 3rd party extension or server configuration. The extension doesn't have this limitation for theme name.
