## Registered User account

Posted by philc - 2016/04/18 14:36

---

Hi,  
I'm trying to find a way that a user can register, and view a history of the quizzes they have taken, instead of submitting a simple email address before taking a quiz,  
is there an ext to allow user accounts and reports ?  
thanks

Hello,

Create a menu item with type "ARI Quiz -> Quizzes Results". It will navigate to a page with all quizzes results of currently logged user.

Hi

I dont see a way for a user to "register",  
other than have a basic name and email prior to taking a quiz,

I cant see a way for somebody to visit the site, log in, and get a history.  
is this possible ?

The extension works with Joomla! users. Joomla! supports ability to login (for example mod\_login module), register and etc.

ah ok got it,  
however, the link "view" in the user history shows only the text template page,

the "quizzes results" from the admin shows the actual quiz answers,  
I would like the user to be able to see the actual answers,

how do I do that ?

thanks

Set "Results settings -> Show detailed results" parameter to "Always" value in quiz settings.
