
Deprecated: Non-Static Method AriKernel Error

Posted by Nick Starbright - 2016/04/28 22:44

Hi, I've Recently updated my template from the stock Joomla Protostar template to the Joomshaper Helix II framework template.

I've created some drop down menus for my Ari Quiz section. Ive noticed on certain pages when I hover over the link the drop down causes my page to become really long and then I figured out why. In the drop down menu it displayed a bunch of deprecation errors. And it appears only on a few pages which would be my CB login page, User Profile page, Forum, My Hika Shop Store page. Here are the error codes:

Deprecated: Non-Static Method AriKernel::Init() Should Not Be Called Staticly, Assuming \$This From Incompatible Context In /Home/xxx/Public_html/Administrator/Components/Com_ariquiz/Kernel/Class.AriKernel.Php On Line 109

What do I need to do to fix this?

I should add that my Joomla Install Version is 3.5.1 and PHP is 5.6.19

Hello,

Do you use the latest version of the extension (3.9.0)?

I just looked and my current version is ARI Quiz" v. 3.6.15.

I have the update sites turned on too. I'll double check to make sure that it's on real quick because I should've received that update.

Okay I just checked and does Ari Quiz have an update site? Because in the back of my Joomla, there's no update site for it.

Do I need to provide my purchase information to get access to that?

:lol: DOH! Okay, I see it.

Let me update it and see if those errors go away. Thank you!

Okay I installed the update. The problem appears to have gone away but so did my drop down menus :blink:

Any ideas about that?

Could you explain in more details what drop-downs you mean and what doesn't work?

Sure. On my frontpage at the top I have a main menu with submenus under certain links that are visible. More become visible after logging in.

They are visible on the public page but when I log in, they are no longer present as they were before installing the update.

I can give you a link if you'd like to see for yourself?
