
Correct answer= 0 points? Problem

Posted by NilsT - 2016/07/13 11:02

Hello once again and thanks for your fast support last time!

Now I suddenly have got the problem that some quizzes, although answered correctly now show a 0/0.00 points with 0% outcome. Did I do something wrong while creating the quiz, or what could be a common cause for this behavior?

Thanks in advance!

Hello,

Check that value of "Score" parameter in question settings more than 0.

Regards,
ARI Soft

Ok... my bad... I flipped a row higher and put the score inside the Attempt count... *Bang head on table*
Thanks a lot!
