Unrandom order not working

Posted by victoriammt - 2016/08/07 18:25

_____

Have updated to the latest version.
When I make a new quiz I have selected NO under Quizzes>Main Settings>Random Questions
but the questions are still coming out in a random order. Is there a bug or perhaps another setting somewhere overriding
this one? I was assuming the order would be numerical ID order from the question bank - am I wrong?

_____

Hello,

If you use "Question pool" parameter section in question category settings, question s will be selected from bank
question in any case.

_____

Sorry - I don't understand what I am supposed to do.
If I don't use the pool, it says there are no questions.

Can you explain how to make the questions appear in a not random order, thanks.

_____

A quiz can be populated with questions directly. For this click by "?" icon in "Actions" column in quizzes data grind on
"Quizzes" page. Quiz questions page will be opened.
