## php warning messages filling up error\_log

Posted by mattdocs - 2017/10/04 17:44

---

Hi, we are currently running ARI Quiz version 3.8.4 on a Joomla 3.6.5 site with PHP version 7.1. The plugin is filling up Apache's error\_log with PHP Warning messages - about one every second or less. Here are excerpts of the same three warning messages, which are getting generated over and over again:

PHP Warning: Declaration of AriDateUtility::toUnix(\$date, \$local = true) should be compatible with JDate::toUnix() in ../components/com\_arquiz/kernel/Utils/j16/class.DateUtility.php on line 104, referer:

PHP Warning: Declaration of AriQuizTableQuiz::\_getAssetParentId() should be compatible with JTable::\_getAssetParentId(?JTable \$table = NULL, \$id = NULL) in ../components/com\_arquiz/tables/quiz.php on line 23, referer:

PHP Warning: Declaration of AriConfig::set(\$name, \$val) should be compatible with JObject::set(\$property, \$value = NULL) in ../components/com\_arquiz/kernel/Utils/class.Config.php on line 208

The error logs are huge and I am having to delete them to reclaim space. What can I do to disable these warning messages?

=====

Hello,

Send your order number by email please.

Regards,  
ARI Soft

Hi, I forwarded the order number as you requested. However, I still don't have a resolution. Should I hide PHP warning messages by appending ~E\_WARNING to error\_reporting in the php.ini file?

---

I hid the PHP Warning messages in my php.ini file, but my error\_log is still getting filled with PHP Notice messages like these:

PHP Notice: Only variables should be assigned by reference in ../joomla/administrator/components/com\_arquiz/kernel/Joomla/Tables/class.Table.php on line 409, referer:

I'd appreciate any input. Should I just disable error logging altogether?

If you want to disable notices, use the following value for error\_reporting parameter:

`error_reporting = E_ALL & ~E_DEPRECATED | E_STRICT | E_NOTICE`

Thanks, I can do that. Is there a newer version of ARI Quiz that is more compatible with PHP 7.x that I could upgrade to so I don't have to disable the warning and notification messages?

It will be totally re-worked in "ARI Quiz" v. 4.x.

Is there a newer version that is compatible with PHP 7.x yet? We are seeing additional issues that could be a result of this issue as well and were wondering when the update would be released?
