
Some good suggestions to make ARI Quiz Better

Posted by pide - 2008/12/19 04:18

we are using ARI Quiz and infact its a good component However there are some features/suggestions which needs to implement.

1- There should be an End button along skip and save. So, Users would be able to end the quiz whenever they wish to save the attempted questions results.

2- There should be privacy feature like if there is a math's teacher or data entry operator his access should be limited to maths quiz/questions he must not able to access like view, delete or enter other quizzes or questions.

3- ARI Quiz should use their own registration system and must have important fields like

- NIC Number
- Student Name
- Father Name

and these fields data should be shown in reports too along student result.

4- Entering questions in bulk amount from XML file. So, set of questions would import with a single click.

The above four pionts are very important and believe me by implementing them it will make it a complete package.

Thanks for your suggestions.

1 we will add to our implementation list.

2 and 3 look rather specific. We can suggest them as custom development.

4 will be implemented in next ARI Quiz release.

Regards,
ARI Soft
