
Which version?

Posted by Alan Henness - 2008/12/25 17:52

Can you tell me how I can find out which version of Quiz I am running?

Also, your Member Area isn't working: clicking on the top menu gives:

(<http://www.ari-soft.com/undefined&Itemid=47>)

404: Not Found

Sorry, but the content you requested could not be found

Hello,

Member Area now functions correctly. Sorry fr inconvenience.

Quiz version can be found out from the table #__ariquizconfig (where #__ is your Joomla! database prefix).

Regards,
ARI Soft

Can I suggest that you make it easier in a future version (perhaps display it on the License page)? Many users will not be familiar or comfortable accessing the database.

Is there a list of the changes made since V2.1.4?

Thanks.

Major changes:

- Parse plugin tag option added to quiz settings. Disabling this option will disallow question text to be processed with mambots (plugins)
- Single, Multiple and FreeText question can have different scores for different answers
- Single question may display possible choices as radio buttons or as drop-down
- Single, Multiple, Correlation and Drag'n'Drop Correlation questions have Randomized order setting that allows displaying possible choices in random order
- Last results and Top results modules have 2 new options: ignore anonymous users or not, display login or user name
- UI enhancements for Drag'n'Drop Correlation question
- Bugs fixed
- Performance improvements
- German and Russian translations updated

Regards,
ARI Soft
