
ARI Quiz 2.0 available!

Posted by admin - 2008/07/22 11:49

ARI Soft team is proud to announce ARI Quiz 2.0. This is new improved version of well-known ARI Quiz component that is used to create various test to evaluate respondent's level of knowledge.

New features:

1. ARI Quiz 2.0 is Joomla 1.5 native now which means that you don't need legacy plugin to be enabled any more.
2. AJAX Grid - new grid is used for the tables.
3. Back-end part is significantly improved.

The main characteristics of ARI Quiz are:

- * allows to create tests using access rights for users
- * provides statistics of test results
- * allows to group tests via categories
- * provides number of predefined types of questions
- * versioning: after you have modified test's questions old information is preserved
- * unicode support
- * question templates support
- * supports css templates for quiz
- * ability to create templates for result pages, emailing results, print versions
- * export to CSV, HTML, Microsoft Word, Microsoft Excel format
- * supports Joomla SEF
- * comes with built-in ARI I18N support, which means that you can easy internationalize your component, change messages of the user interface and create different locales.
- * supports AJAX making the component more fast and powerful. AJAX technology lets user to pass test without page reloads - component will update all the page stuff itself
- * ability to randomly select number of questions from question-pool or use them in queue
- * comes with built-in Windows-like calculator
- * includes question bank. It contains questions that can be added to quizzes. If you change question in question bank all the changes are applied to quizzes that are created on basis of these question.

ARI Quiz contains 4 modules:

- * Last result: shows N results of last passed tests
- * Top result: shows N best results of passed tests
- * User last result: shows N results of last passed tests for logged user
- * User top result: shows N best results of passed test for logged user

ARI Quiz works in Joomla 1.0.x and Joomla 1.5; in Mambo 4.6.2.
