Using images in single Question & Correction Quest
Posted by Forex_Master - 2009/01/15 09:19
_____

Hi there,

I just bought his software yesterday and am at the very beginning - Looking forward to integrate it on my forex website www.trader-forex.com for candlesticks patterns.

It doesn't sound immesely difficult to navigate through the main questions types but there is something I am not able to do:

specifically, I would like to know how I can create the same kind of question that the last one you have in your demo (where there a 5 radio button questions each one being an image).

Can I just type the image patch instead of writing a text in the question fields ? How ?

Also, can I do that as well in the Correction question ? (so a user can match an image by another?).

Looking forward to your reply, best regards.

Hello,

1. To create the question as on our demo you should create Single Question and add necessary answers (press plus "+" sign to add new answer). In each answer type the following HTML code:

where images/image.jpg is your image placed in %Joomla_folder%/images.

2. To create correlation question just select the question type as Correlation Question and fill appropriate answers at the bottom of the page. The same is for Drag'n'Drop correlation question (D&D Correlation Question type).

Regards,
ARI Soft

Hi, your solution worked at first and images displayed correctly.

But then for some reasons the link:

automatically changed itself to:

and this link do not work!

I can't do anything about that, as soon as I input the right path and save, now, without doing any changes, I get back the erroneous path.

Can you advise ?

I can PM you my admin access if you can be kind enough to take a look..
