Accessibility

Posted by cantthinkofanickname - 2008/07/24 13:39

_____

I like the quizz but how accessible is it. E.g. if I turn off javascript the download does not end. So the quizz does not start. Is there a non javascript version?

I see it is possible to use the keyboard with this extension.

I am looking for a photo quizz where people can type in their answer to be judged later. Is this possible i.e. not give results during the quizz?

Thanks

_____

Hello,

Thanks for your interest in ARI Quiz. The component uses AJAX technology so it will not work with JavaScript turned off.

You can insert a picture as a question and set answers like points: for example, 0-10. You also can create your own text template (using ARI Quiz back-end) to show upon quiz completion - for example text: "Thanks for your ratings".

Regards,
ARI Soft
