## Providing answers to ARI QUIZZES

Posted by dcasmr - 2008/07/28 23:59

---

Hi Admin,

One main purpose of a QUIZ is to provide answers to the user. The answer can be descriptive to allow the user to fully understand why he missed the question-

1.) Do you have the way to provide the user an answer after he click on the Save button: Example: You are correct! (maybe with the possibility of adding a smiley)

Example 2: The answer is: Descartes- A famous French Philosopher and Mathematician.

Also, can we import from a comment delimited file or ACCESS into ARI QUIZ or even via SQL codes?

Thanks in advance-

=====

1. You can order custom development for this feature - if you are interested please write us a letter with the exact requirements and we will make the estimation.

2. There is no such functionality.

Regards,  
ARI Soft

This should really be a built in feature..what's the point of a quiz without giving answers or descriptions?

I agree with mmcghee. I understand you can't put at once all the features, but when you build a car, it must have four wheels.

Its better to make a complete product and charge a little more than charging everybody a whole lot more money to add the same thing. That business model is bad for customers-

Admin, Please look at <http://ari-soft.com/ARI-Quiz-Feature-Request/283-Explanation-of-Answer-/-Results.html>.

I understand that you want to add a new field to every question for notes. There really needs to be a field for possible answer, so if someone answers wrong, you can explain why that answer was wrong in that field.
