
Question score start from 0 ??

Posted by NJJimInHI - 2009/01/21 20:49

Greetings,

I'm composing my first test Quiz and I'm getting the following error when I try and save a question:

Question score start from 0

All of my questions are multiple-choice with 4-radio button possible answers. The correct answer to this question is 30.051. Can someone tell me how I can correct this? I will need correct answers that will be in such a format .. i.e. decimal points to the thousands.

Mahalo in advance

=====

Hello,

Sorry, but quiz supports only integer values. For resolve this situation you can expand points range. All score multiply by 1000.

Thank you for your very fast reply. As I will often need to pose questions where the correct answer will be decimal points to the thousands (.67731, .9775, etc), is there some kind of workaround you might offer? Perhaps listing graphics files in the answers? This is very important to the type of questions I need to list.
