Fatal Error

Posted by MBaas - 2011/02/12 00:28

_____

Just installed version 1.20 of EasySlider on my Joomla 1.6 site.

After setting the module up, I'm getting the following error-message:

Fatal error: Class 'JParameter' not found in
/.../.../.../.../.../modules/mod_arieasyslider/includes/kernel/Mambot/class.MambotProcessHelper.php on line 145

The system extension plugin is installed and activated.

What's going wrong?

_____

Hello,

Download and upgrade "ARI Easy Slider" module please.

Regards,
ARI Soft

_____

Thanks, that did it.

Another problem:

I've set up the module to auto-rotate through articles. When the final article is reached, all that remains visible are the navigation controls. The rest of the space just turns blank and refuses to show any content. Not really elegant. Would be much better if the module would return to the first article... ;)

_____

And one more: when trying to add HTML-tags to the slider's content, these tags get stripped. For example I'm trying to get the title displayed in bold font, then adding a linebreak followed by the intro intro-text, another two linebreaks and then a readmore link. The result is not that great: the whole content is displayed in just one line, the tags are ignored and the readmore-link isn't displayed at all...

_____

Download and upgrade "ARI Easy Slider" module please. New version supports HTML code in "Template" parameter. About "auto-rotate" problem from your previous post, set "Continuos" parameter to "Yes" if you want to show first (or last) item when last (or first) item is reached. You can also set "Opposite" parameter to "Yes", it defines way in what the slider will scroll item from last item to first item and vise versa.
