## Fade effect

Posted by snappycreations - 2011/03/24 12:48

---

Hi there,

I recently purchased ARI Easy Slider, so far it works great and I'm happy with it. But my client does not like the sliding animation and wants it to fade instead.

Is it possible it include this in the next release, or how can I go about adding it in myself?

Thanks,

Tom

Hello,

The latest versions of purchased extensions are always available in "Member Area". Fade in-out effect has been added to ARI Slider extension, not to ARI Easy Slider.

Thanks for the quick reply, I realised this after I posted and edited my post.

Is it possible to add a fade animation to Easy Slider?

Thanks again,

Tom

ARI Slider does not have the dot nav that ARI easy Slider has. :(  
Any way to add fade to ARI easy Slider?

In your write up it says Supports slideshow mode most slideshows fade but it is my fault for assuming.

Other than that module works really great! Just missing the function I need.

Hello,

We will try to add support of "fade" effect to "ARI Easy Slider" within several days.

Wow. That would be great!

Pride yourself on offering outstanding customer support. Bar none.

thanks again

Download and upgrade "ARI Easy Slider" module. New version supports "Fade" transition effect.

Thank you so much. I have never experience a company providing such great support. I'm buying the component again just for your troubles.
