## Problem with IE

Posted by George V. - 2011/05/06 14:14

---

Hello,

I have a problem with mod\_slidemenu in combination with mod\_arieasyslider. I think it is the javascript that gives the problems. mod\_slidemenu does not work when mod\_arieasyslider is turned on. The website is link namely the following link. link

Regards,

George

Hello,

Could you explain what you mean "mod\_slidemenu does not work"? It doesn't show menu items or something another? It occurs only in IE?

This problem with extension which generates the next code:

```
#at15s_brand a {color:#000000;}
```

If you open page source, you can see that this code repeats a lot of times. IE has limit for including styles. We suppose it is 'StreetView' plugin.

Thanks for the quick reply! The problem seems to be created by an mobile app which sends content to the website and which is shown in ARI Easy Slider. After deleting the content from the website everything seems to be ok.
