Auto-sizing of the Module
Posted by JPR - 2011/06/08 19:49

_____

Hi forum,
please excuse this beginner question, but is it possible to configure the ARI Easy slider so that the modules does an auto-size functionality?
To make it more clear:
I use it below my menu, and it looks fine in a fullscreen browser window.
Now, when I resize my brower window to let's say 1/3 of the screens width, then the menu shrinks automatically to 1/3 of its standard size, but the ARI Easy slider keeps its size (px width) and thus looms into the text content....

Is there a way to fix this?
Thanks,
Jens

Hello,

Currently the module doesn't provide this ability, but you can submit feature request here and we will add this ability in a future release.

Regards,
ARI Soft

Thank you for your quick reply. I'm sorry to hear that. Can you give me perhaps some tips to point me in the right direction, so I know which files I should edit, to give it a try myself?

rgds, Eric

Can you please implement this because i need it. Easy slider for me is indeed the easiest article slider there is. making it responsive would be great!

I'm willing to pay extra for this feature if you can implement it this week.

hope to here from you.

kind regards,
Mark

Hi -

I have the same question of responsiveness as pertains to ARI SmartContent SQLTable.

It doesn't appear to be responsive and if this is true, is this another planned future modification? and if so, would you be able to provide a general target date for this change?

_____

What extension do you mean? This topic is about "ARI Easy Slider" extension. If you mean "ARI SQL Table" plugin, it shows data as a plain HTML table and it can be wrapped with another table plugins like "ARI JDataTable" or "ARI JTableSorter".

Hi,

one month further. any ideas when Easy Slider will be responsive?

kind regards,
Mark

_____

Hello,

"ARI Easy Slider" v. 1.7.0 is responsive. Upgrade the module to the latest version and set "Responsive" parameter to "Yes" in module settings.

Regards,
ARI Soft
