
Hide content plugins

Posted by sc00zy - 2011/06/15 08:37

Hi,

I'm setting up ARI Easy Slider for a client who's using a plugin showing icons under articles, but I don't want this content plugin (or others) to show up in the module. Is there away to achieve this?

Thanks

Hello,

Do you show module in module position or load it into an article? If you load it into an article what plugin do you use for this purpose?

Regards,
ARI Soft

Hi,

Thanks for the quick reply. I use the module in a position.

Download and upgrade "ARI Easy Slider" module. New version provides new parameter "Articles -> Parse plugin tags", set it to "No". One note, after upgrade copy file which we sent by email again that add support of {\$readmore_link2} predefined variable.

The changed file for hiding the readmore link makes the parse tags option not work. Could you please send me the new class.EasySliderArticlesModel.php file with parse option and hiding the readmore link?

Thanks so much and sorry for being a pain in the ass ;-)
