## Margin Problem in FIREFOX4

Posted by tony89 - 2011/06/16 07:31

---

I don't care about the firefox issue, because probably it can't be fixed.

But if you take a look to Provincia Bergamo with firefox, you'll see that there is a conflict between ari slider and the menu.

The ari slider's position is set as "relative", but it appears on the right of the menu, and so the menu doesn't work.

THE QUESTION IS:

How can I set a custom margin for the ari slider I want?

Because I found a "base.css", but by changing the parameters every slider was affected by the modifies.

The site is builded on the Yoo\_nano theme.

Thank you

I managed to put the slider under the menu and make everything works.

But the slider to appear in the center of its DIV.

How can I do that?

How can I set custom margins for a single slider?

thank you

Hello,

Add the next CSS rules:

```
.es-overlay .es-container,  
.es-overlay .es-controls  
{  
  margin: 0 auto  
}
```

Regards,  
ARI Soft
