Questions about easi slider

Posted by AndyK - 2011/06/17 21:37

_____

Hi guy

Just wanted to check my understanding of the product, that it 'sits' on the page and can enable a visitor to scroll through articles?

Also, how does it work after I install it? As in how would I include that slide on an article?

(Fairly new to Joomla)!

Many thanks :)

_____

Hello,

The module provides ability to specify from what categories (sections) articles will be selected. It also provides ability to specify additional parameters like to include frontend articles or not, IDs of articles which will be ignored and others. The module can be embed into an article with help "Content - Load Module" plugin or with help "Content - ARI Easy Slider" plugin which is included into extension's package.

Regards,
ARI Soft

Hi

Thanks for the quick reply :)

Regarding using it, still don't quite understand (sorry, new to Joomla)

So I would install the file, then I would also need to install the easy slider plugin?

Then what would I do from there to include a slider in an article?

Just want to make sure I understand how it will work before I purchase

thanks again

_____

"ARI Easy Slider" module can be used without plugin if you want to show it in site template module position (this is standard Joomla! feature). If you want to embed the module into an article, install "Content - ARI Easy Slider" plugin, enable it and place the next code into an article:

{arieasyslider moduleId="MODULE_ID"}{/arieasyslider}

Where MODULE_ID is ID of "ARI Easy Slider" module which you can find in Joomla! module manager. For example if

you want to load "ARI Easy Slider" module with ID equals to 45, the code will look like:

{arieasyslider moduleId="45"}{/arieasyslider}

Thanks

OK have installed and tried that, however when I view the page (www.sitngocoaching.com) it just displays the code as text rather than the slider

Help! :)

_____

also I've managed to get it working from a module but it's only displaying the first article? (there should be 2)

http://www.sitngocoaching.com/index.php?option=com_content&view=category&layout=blog&id=6&Itemid=12

thanks again for your help

_____

Hello,

This problem with JS Optimization extension (probably it is site template feature). It can't handle remote files correctly. We can investigate the problem in more details if you provide temporary access to your J! backend by email.
