# Continuous rotation rather than wrap around

Posted by somethingclever - 2011/07/28 17:59

_____

Hi,

I have made some changes to the ARI EasySlider module so that it spans 100% width of my site and centres the current article within my page.

One last thing I need to achieve is to have the module display the articles in a loop, I have selected continuous scrolling but I need the transition to be seamless, i.e. when the user reaches the last article the first article should appear next to it to give the appearance of a continuous loop.

Demo of what i currently have is here;

http://test5.certico.co.uk/index.php?option=com_content&view=article&id=8&Itemid=2

Please can you give me some advice on how to achieve this?

Thanks in advance.

I realise from looking at the code that this may be tricky to achieve as the javascript changes the margin values to achieve the scroll effect.

If its not possible to achieve a continuous scroll then can you advise on how I can make the page load and immediately display the middle article in the list?

_____

"ARI Easy Slider" v. 1.3.8 contains "Start slide index" parameter. It provides ability to specify index of start slide.

Regards,
ARI Soft
