## Read more link again

Posted by cadratin - 2011/10/04 12:44

---

Hi,  
I'm using easy slider with the advanced theme.  
I added the variable {\$readmore\_link} in the template field and added a read-more into the article. I see the link button but it stays inactive...  
Any clue why?  
Thanks in advance for any help

Hello,

Sorry, but provided page requires credentials. About your question, {\$readmore\_link} variable contains only link, not HTML code for a link. You can use the next code:

Read more...

Hi again,  
thanks for answering. I removed the credentials.  
Here is the code I inserted into the module template field for the link variable:  
Read more...  
Don't understand why the link is inactive.

Set "z-Index" parameter in module settings to 1.

Thanks again, but it seems that even if I add a z-index 1, the style is overridden (see image attached) somewhere. Or I'm doing something wrong...

Could you provide temporary access to your J! backend by email so we could investigate the issue?

Try now please. It didn't work because "CSS Styles" parameter was used instead of "z-Index" parameter:
