
Title size and color

Posted by nikspino - 2011/12/02 09:38

Hi,
i have almost setted Ari easy Slider on my developing site www.corrieredellaprivacy.it and it works fine, however i have some problem to resolve yet:

- I need to resize title (bigger than paragraph) changing the color (i need to blue title as rest of my site)

-If possibile i would like to do hiperlink title, so visitors can read articles clicking on the title

-If possible, i would like to resize to thunbail (a bit more bigger of normal size), and if is possible to do image as hipertext link, as above, visitors can read article clicking on the image

I tried some text with css style but i resolved nothing :-(

Could help me to set all right as i need?
I hope that i ask not to much!

Nicola :(

Hello,

Use the next code for title in "Template" parameter in module settings:

{ \$title }

Regards,
ARI Soft
