
readmore_link generates extra parameters

Posted by 6degres - 2012/02/20 12:55

This is the URL when I select the article:

<http://www.urbanum.ca/11-sports/hockey/102-echec-de-la-lnh-a-atlanta-mythes-et-realites>

This is the URL when I select the "readmore_link":

<http://www.urbanum.ca/sports/hockey/11-sports/hockey/102-echec-de-la-lnh-a-atlanta-mythes-et-realites?Itemid=215>

Yours generates adds the whole category structure before the already included category structure in the URL ? Yours also adds the Itemid in the URL ?

Hello,

The module uses standard Joomla! API to generate links to articles.

Regards,
ARI Soft

Hi,

OK, after a few hours of tests, I figured out one needs to have a "category blog" menu type (for that category) set somewhere for this to work properly.

Thanks,
Danny
