Almost Nothing Working
Posted by jgribble - 2012/09/26 16:31

_____

I am loading articles containing images from a category. The show will not auto-play, and none of the navigation controls work either, when I display them. I am publishing the module in an article using the easy slider plugin. The show does pull up a static image - the last in my series. But no matter what I do I can't get the whole show to play from start to finish. Also, nothing works at all unless I turn Jquery off. I'm sure these are small issues. I've been using ARI products for a long time, and they are great.
Here is a link to the test page where I am trying to get the slider configured for the front page.
http://www.javelincommunications.com/milwaukee-digital-marketing-agencies/
Thanks!

_____

Hello,

It seems this is a problem with extension which you use to optimize loading of javascript files. Could you provide a temporary access to your J! backend by email so we can investigate the problem in more details?

Regards,
ARI Soft

_____

Seems to be working beautifully, exactly as I had it configured. I may have a few more questions, but look for my review soon. Another great component.

_____

Thanks to your help, I now have the slider working beautifully. Please click again to play the show.
http://www.javelincommunications.com/milwaukee-digital-marketing-agencies/ You'll see that it stops on a slide which makes a culminating call to action. I've left an area open on the right. Right there, I would like to embed a new slider show with links to inside pages of the site. Recapping at a slower speed the very quick series of slides which display on

open. But the system is balking at this second instance, even though the second instance is configured completely differently and is within a Joomla article. This site has Modules Anywhere; and I've experimented with the ARI plugin. But neither works well. I think the effect would be wonderfully dynamic and informative. Lots of Wow. Can it be done?

_____

Just a footnote. I found that I can place a static module in the last slide without any problem. Works great, looks great. But any dynamic modules will not load. Any thoughts? Thanks again. A great component. I also would like to change the default left-to-right animation to right-to-left and am searching the forum. I'm sure there's some easy code.

_____

Use "Auto-rotate reverse motion" parameter to specify direction in auto-rotate mode (from left-to-right or from right-to-left).

About dynamic module, it can be a problem with module which you can try to load. Probably it can't work as "ARI Easy Slider" slide. We can investigate this problem in more details if you provide a link to a page where we can see the problem.

_____

If it probably can't work as ARI Easy Slider, I would love to be able to load some other kind of dynamic module. The effect would be just so cool.
Here is the slide show. You'll see the nonfunctional call in the last slide.
http://www.javelincommunications.com/milwaukee-digital-marketing-agencies/
Here is the last slide in the sequence. (where the slider-within-a-slider is embedded).
http://javelincommunications.com/administrator/index.php?option=com_content&view=article&layout=edit&id=244
Here is the slider-within-a-slider.
http://javelincommunications.com/administrator/index.php?option=com_modules&view=module&layout=edit&id=170
Thanks!

_____

It doesn't make sense to load the same slider to the same slider (load "ARI Easy Slider" module with ID = 169, to "ARI Easy Slider" module with ID = 169) because it causes infinity loop and nothing will work.

If you want to use content plugins inside the slider, set "Articles -> Parse plugin tags" parameter to "Yes" in "ARI Easy Slider" module settings.

_____

Thanks. Will I be able to user other kinds of content plugins, as long as they're not Easy Slider?

Re:Almost Nothing Working

Posted by admin - 2012/09/27 17:48

_____

Yes, it is possible to use other content plugins.
