
How to style the content of the slider?

Posted by Tigerlily - 2015/05/04 20:22

Hi:

I'm trying to style the content within the slider. Specifically, I need to make the title bold and larger font from the text of the article.

I simple cannot figure it out.

I have

{ \$title }

{ \$introtext }

But I cannot seem to style these.

Can anyone help please?

I tried to add this to the CSS on the module, but it did nothing:

.es-container .es-news-item A.contentpagetitle

{

font-size: 14px;

color: red;

}

Hello,

You can wrap predefined variables with a HTML code. For example:

{ \$title }

{ \$introtext }

Hi, thank you, that worked for the styling issue, however, the navigation will not work, nor does it rotate.

I've temporarily turned the site online so you can see it. It's the Announcements module on the front page:

<http://katphish.net/comb/>

If you provide me a secure place, I'll give you a login to look at back end. But I have everything turned on.

Additionally, how can I make the title a link that takes them to the full article? Or insert a read more?

It is a javascript conflict. jQuery library is loaded twice on your site. One time by Joomla! and another copy is loaded by "homepageslideshow" extension. The correct way loads jQuery instance only once (using instance which is loaded by Joomla!). You can contact "homepageslideshow" extension support and ask them fix this problem or it is possible to use a 3rd party extension like "Easy jQuery" or "JS Plant" to resolve this problem.
