## Problem with Artisteer template

Posted by moraldi - 2010/07/22 11:44

---

Hi,

I have purchased the ARI Easy Slider and I am very happy because it does what I was looking for. But I have experienced some problems with my Joomla template:

If I change the theme other than the 'default' or 'dotted' then my template changes its colors in the top menu and in the side menu. Also there is always a small rectangle in the top left corner of the slider.

Any ideas?

Thanks in advance

=====

Hello,

It can be conflict with site template styles. Could you provide link to page where we can see this issue that we can investigate it and provide solution? If it's private information, you can send it by email.

Regards,  
ARI Soft

Unfortunately the site is still in development. Is running on localhost. Here are 2 screen shots that might help

<http://www.mediafire.com/imgbnc.php/bcfd498c43173d06b013c8f43641bee36g.jpg>

<http://www.mediafire.com/imgbnc.php/01663177961925d9d7bbfeef8d55b9e46g.jpg>

BTW: I am looking for an extension of Joomla having the following features:

1. Capable of displaying unlimited number of images which they are collected in a folder (using some nice transition effects)
2. Capable of assign to each image an internal link of Joomla with "point and click" functionality

Do you have such an extension?

Sorry, but screenshots can help in this case because we should see site template styles that find which of them are conflicted with the extension. If you can't upload your site to an online server, could you provide your site template for investigating purpose? Regarding the second question, you can try our free extension ARI Image Slider. This extension creates image slideshow based on images from specific folder(s) and provides possibility to define images descriptions and links images with links with help INI file. You can also be interested in our commercial image slide show extension called ARI Image SlideShow. This extension can create image slide show based on images from specific folder(s), Flickr photosets and Picasa albums. It also provides possibility to define links for images with help CSV file.

Here is the template you've asked

<http://www.ari-soft.com/images/fbfiles/files/kotakidis.zip>

I would like also to thank you for your suggestions as far as the extension is concerned.

That avoid small rectangle, add the following CSS rule to template.css file of site template:

```
.art-post ul.es-items-container li.es-news-item
{
    background-image: none;
}
```

Regarding the second issue, we can't reproduce it. It can depend on slider items. Could you open page with the slider in a browser, choose 'File -> Save Page As -> Web Page, Complete' in a browser menu, save page to your local disk, archive it and send to us by email that we can investigate it?

The blue rectangle disappeared

Here is the complete page

[http://www.ari-soft.com/images/fbfiles/files/Web\\_for\\_You\\_files.zip](http://www.ari-soft.com/images/fbfiles/files/Web_for_You_files.zip)

Great support!

Download the extension package in 'Member Area' and upgrade 'ARI Easy Slider' module, please. It should resolve the issue.

---

It works like a charm!

I noticed another issue (sorry guys, I am not an experienced user)

---

The {\$readmore\_link} predefined variables is not working. It displays the text of the link (I suppose) but it does not displays the link itself. Do I have to add a 'Read More...' field in my article?

=====

## Re:Problem with Artisteer template

---

Regarding new question, {\$readmore\_link} variable contains only link, not 'Read more' text or something another. It helps to create read more link in different views. If you want to use 'Read More...' text link, use the following pattern, please:

Read More...
