ARI Smart Content - Easy Slider with Data source

Posted by jmgroud - 2016/03/03 11:28

_____

Hello

It is possible to create data source with a SQL Query and using the result to user "Easy Slider" ?

For exemple, i would like to have all pictures and name for my Contacts table in Joomla database...

Thanks a lot
Jean-Marie

_____

Hello

It's really cool :)

I don't found the link with "SQL QUERY" in "Easy Slider", only data source with "Images - Local Images", "Picasa" and "Flickr" ...
So only link with content of a directory, nor with a "SQL Query" directly...

It is possible to give me an real exemple, for exemple :

To obtain all contatcs (table "(xxx)_contact_detail") in category "Admin" (table "(xxx)_categories") and i want have in the slideshow :

- The image : field "image" in the table "contact_details" (minimum)
- The name : field "name" (for exemple, displayed if possible below the image)
- The fonction : field "con_position" (for exemple, displayed if possible below the image)

Parameters in "SQL Query" ?
Parameters in"Easy Slider" ?

Thanks a lot !
Jean-Marie

_____

It is possible to use "SQL query" data source for "ARI Smart Content - Easy Slider" plugin (not for the module). Data source can be created on "Components -> ARI Smart Content -> Data -> Database data -> SQL queries" page on Joomla! backend. Plugin code for "ARI Smart Content - Easy Slider" plugin looks like:

```
{easyslider source="5"}
 {params}
  {param name="itemTemplate"}{$name} - {$image} - {$con_position}{/param}
 {/params}
{/easyslider}
```

Documentation for the plugin is available here. Check that the plugin is enabled.

Regards,
ARI Soft

_____

Hello
I try this solution and it's good !!!!!

I have 2 problems with the image (for exemple image from the contact)

SQL query : SELECT name, image, con_position FROM (xxx)_contact_details
Code :

```
{easyslider source="5"}
  {params}
   {param name="itemTemplate"}
     {$name} - {$image} - {$con_position}
   {/param}
 {/params}
{/easyslider}
```

Problem 1
The result for the image is the path of the image.
Indeed, the image is not stored in the database but only its location on the disk.

To bad... :(
Is there a solution to display the image and not its path?

- With "ARI Smart Content - Easy Slider" to have a slideshow with images...
- And if possible with "ARI Smart Content - HTML Table" to have grids with images...

Problem 2
I can't see the result with "ARI Smart Content - Easy Slider" because there is only 1 column and this colum is very small.
I have places only for 3 characters...

Tout can see this result here : http://pp.jmgi.fr

_____

1. Use the following plugin code:

{easyslider source="5"}
{params}
{param name="itemTemplate"}
{$name} - - {$con_position}
{/param}
{/params}
{/easyslider}

Regards,
ARI Soft

_____

Hello

I try this solution but no good result...
I have this display :

xxxxxxxxxx - - xxxxxxxxxxxxx

 tags do not appear to be interpreted before the page display... :(
Problem with the menu link? Article? Plugin?

Here the source in my article :
{easyslider source="5"}
{params}
{param name="itemTemplate"} {$name} - - {$con_position} {/param}
{/params}
{/easyslider}

You can see the result here : http://pp.jmgi.fr
You must be connected to see this exemple : login/passw = tests/ari5522

_____

Switch your WYSIWYG editor to plain text mode and fix plugin code. The editor encodes HTML code so it doesn't work properly.

Re:ARI Smart Content - Easy Slider with Data source

Posted by jmgroud - 2016/03/04 18:30

_____

I'm using JCE (latest version 2.5.14) and Joomla 3.4.8.
I try different solutions (a lot of parameters in JCE)
Allways the same result : no image ! :(

I try another solution : i use another plugin "sourcerer" (https://www.nonumber.nl/extensions/sourcerer)

Here the source of the article :

Article (Content) - Tests extensions
ARI Smart Content - Easy Slider (plugin easyslider only)

```
{easyslider source="5"}
  {params}
    {param name="itemTemplate"}
      {$name} - <img src="/{$image}"> - {$con_position}
    {/param}
  {/params}
{/easyslider}
```

ARI Smart Content - Easy Slider (plugin easyslider + plugin sourcerer)

```
{source}
  {easyslider source="5"}
    {params}
      {param name="itemTemplate"}
        {$name} - <img src="/{$image}"> - {$con_position
      {/param}
    {/params}
  {/easyslider}
{/source}
```

The second work (with plugin sourcerer) !
Yout can see the result on my website now :)
This is a solution but i must use an another plugin... I'd rather use only as yours

Solution ? Maybe false parameters in JCE ?
Thanks

_____

Could you provide a temporary access to your J! backend by email and specify where the plugin code is used (in article or module) so we can investigate the problem?

Regards,
ARI Soft

_____

Yes of course !!!!!
It's so simple... ;)
Thanks a lot...

When you come to Paris, I offer you a bottle of Champagne
I am very serious...

I consider this topic as completed

Now I will try to work on the setting up of the slides...
For example, a mixture of multiple images with or without text...

You have been very professional in your approach, I congratulate you.
Have a good day
Jean-Marie GROUD
