## Safari and FireFox problems

Posted by thosfelt - 2010/08/05 00:44

---

I have a site where I have the easyslider working the way I want with IE and Opera, but Safari and FireFox don't work. If you go to:

<http://ebio.colorado.edu>

you'll see that with IE and Opera the image that slides is wrapped by a link and clicking on the image will open a page in a new window. But with Safari and Firefox the links don't work - any clue why?

Thanks

Hello,

This problem with new theme for the module. Open theme CSS file (/modules/mod\_ari easyslider/includes/js/themes/ebio/styles.css), find line #29:

```
.es-theme-ebio .es-controls
{
  height:100%;
  left:0;
  margin:0;
  position:absolute;
  top:0;
}
```

and change "height: 100%;" to "height: auto;"

Regards,  
ARI Soft
