
ARI Easy slider in front of submenu of the menubar

Posted by ttongson - 2010/11/19 10:39

I use Ja_purity template. The ARI easy slider is located in the user6 position. The mainmenu is at the menu bar with dropdown of submenu. My problem is the submenus always show behind the ARI slider even I set the z-index -10, -100 etc.

Can someone help me please.

Hello,

Provide link to page where we can see this issue that we can help. Link which you provided by email don't work. When we try to open it in a browser, we get server not found error. If you can't provide link to online page, open page with slider in a browser, choose 'File -> Save Page As' browser's menu item, choose 'Web Page, Complete' option, save all files, archive it and send archive us by email.

Regards,
ARI Soft

It seems it works fine in IE 8 and IE 9. That it works in IE 7 try to add the following CSS rules:

```
body #ja-wrapper
{
    position: relative;
}
```

```
body #ja-wrapper #ja-mainnavwrap
{
    position: relative;
    z-index: 10;
}
```

```
body #ja-wrapper #ja-containerwrap
{
    position: relative;
    z-index: 8;
}
```

Regards,
ARI Soft

Thank you for the following code you provide. It really works.

```
body #ja-wrapper
{
    position: relative;
}
```

```
body #ja-wrapper #ja-mainnavwrap
{
  position: relative;
  z-index: 10;
}
```

```
body #ja-wrapper #ja-containerwrap
{
  position: relative;
  z-index: 8;
}
```

Your help is greatly appreciated.

Custom CSS rules can be added to any CSS file which is loaded by site template.
