## How to display dat tables in an article?

Posted by Sailorman - 2011/12/02 11:23

---

I've a problem showing the ari data table within an article. I entered the code {aridatatables moduleId=id\_number} but there's no table.

Furthermore I don't want to see the module. Is that possible? I mean: will the data table still be seen.

An my last question: how can I show multiple csv files?

=====

## Re:How to display dat tables in an article?

Hello,

For example if you want to load "ARI Data Tables" module with ID = 79 into an article, check that "Content - ARI Data Tables" plugin is enabled and place the next code in an article:

```
{aridatatables moduleId="79"}{/aridatatables}
```

If you don't want to show a module into a module position, set "Menu Assignment -> Menus" parameter in module settings to "None".

About multiple CSV files, do you want to show multiple CSV files in one table or different tables (different tables)? If you mean the second case, Joomla! supports ability to create as many module instances as you wish and it is possible to load different module instances. You can read about it [here](#).

Thanks for your help. In the manual you give this instruction:

ARI Data Tables plugin helps load ARI Data Tables module in Joomla! articles. Type the following code in article for loading ARI Data Tables module: {aridatatables moduleId=""}

This is confusing, because you've to close it: {aridatatables moduleId=""}/aridatatables}

I think it's a good idea to change the manual on this.

Explains why my attempts weren't working either.  
Also was using AngleBrackets around the value.....

---

The module instance which you want to load should be enabled. For example if module ID equals to 10, use the next code:

```
{aridatatables moduleId="10"}{/aridatatables}
```

I was also caught out by this problem. I initially used angle brackets around the module ID and also did not have a closing tag, as shown in the example. It would be really helpful if you could update the description in the content plugin so that it gives the correct instructions.  
Thanks.

Hello,

For example if you want to load "ARI Data Tables" module with ID = 19 into an article with help "Content - ARI Data Tables" plugin, use the next code:

```
{aridatatables moduleId="19"}{/aridatatables}
```

---

Hello,

I've implemented the code as shown but it will not be executed. The raw code is printed in my article.  
I already disable the editor but still there are

- tags around the code. Could this be the problem or is there another thing to mind?

---

I use joomla 2.5.8 with ari table 1.11.3

Greetings,  
Johannes [http://www.ari-soft.com/images/fbfiles/images/2013\\_02\\_04\\_175806.png](http://www.ari-soft.com/images/fbfiles/images/2013_02_04_175806.png)

---

Hello,

Check that "Content - ARI Data Tables" plugin is enabled. If it doesn't help, could you provide a link to a page where we can see the problem?

---

Hello,  
problem solved!

I failed to activate the Plugin. I only activated the Module "ARI Data Tables".

Thank you!

Greetings,  
Johannes

This is confusing, because you've to close it: {aridatatables moduleId=""}/{aridatatables}

I think it's a good idea to change the manual on this.

I'm trying to do the same thing and the article display works fine but, in spite of setting the menu assignment to 'no pages', the module also shows up on the Home page. How do I prevent it from displaying?

Hello,

If the module is shown in a module position despite of "Menu Assignment" parameter is set to "No pages", this problem with site template. We can investigate the problem in more details if you provide a link to a page where the problem

---

occurs and a temporary access to your J! backend by email.

Hi

I need some help as well please?

I am new to this.

I am having trouble displaying: {aridatatables moduleId="107"}{/aridatatables}

I have enabled the module with id 107, type="ARI Smart Content - Data Table"

I have enabled the plugin called "ARI Smart Content - Data Table"

The result is that the page just displays {aridatatables moduleId="107"}{/aridatatables}

Any help gratefully appreciated :-)

---

Hello,

You use plugin code for "ARI Data Tables" extension. "ARI Data Tables" and "ARI Smart Content" are two different extension. Documentation for "ARI Smart Content" is available [here](#).

Modules from "ARI Smart Content" can be loaded with help of "System - ARI Smart Content - Load Module" plugin. The documentation is [here](#). Check that the plugin is enabled. The shortcode in your case will be:

```
{arimodule id="107"}{/arimodule}
```

---

Thank you! With your help I have got it to work! So glad!

Unfortunately, the shortcode you gave still didnt work: {arimodule id="107"}{/arimodule}

But I read the doco you linked to and it mentioned to use the Ari Smart Module Button.

So I went to my article and pressed the button. It inserted the following shortcode:

```
{arimodule id="107" comment="ARI Smart Content - Data Table (copy)}{/arimodule}
```

And this works like a bought one!!!

Thanks for your prompt reply! I am off now to continue developing my website. Cheers, Mango The third.

After some struggling, finally figured out why it wouldn't work for me. If you copy the provided text above, it puts the nonbreaking space code into the line, such as:

```
{aridatatables nbsp;moduleId="128"}{/aridatatables}
```

I couldn't include the ampersand in the code block above, it screws up the display.

Turn on code editing in your text editor on the article, and remove it so it looks like:

```
{aridatatables moduleId="128"}{/aridatatables}
```

By the way, just bought and installed this, and the plugin description still gives the wrong instructions for the code. This really should be fixed.

---

Hello,

Sorry for inconvenience. Plugin description contains the following instruction:

```
{aridatatables moduleId=""}
```

Where is ARI Data Tables module id

`{aridatatables moduleId="128"}` code should work fine.

Regards,  
ARI Soft

## Re:How to display dat tables in an article?

Posted by IanL - 2017/01/30 16:19

---

Yes the Plugin description does indeed state:

ARI Data Tables plugin helps load ARI Data Tables module in Joomla! articles. Type the following code in article for loading ARI Data Tables module:

```
{aridatatables moduleId=""}
```

Where is ARI Data Tables module id. You can find module id if open 'Extensions->Module Manager' page in modules grid in ID column or on module settings page in ID field.

But it still fails to work unless you add `{/aridatatables}` after it in an article.

Note too for others, if copying the text, paste into a plain text editor and then copy again and paste into the article as sometimes background styling can be captured by the copy and will upset the code.

Now have it working after reading this article.

Hello,

An unnecessary code can be added if use copy-paste in design mode of a WYSIWYG editor. This problem with WYSIWYG editors.

One other point, when using some editors like JCE it will change the < and > to codes, just remove them and place the module number between quotes like

```
{aridatatables moduleId="170"}{/aridatatables}
```

This works

=====
