## Ari Data Tables Installation Error

Posted by dragosel80 - 2010/06/27 06:53

---

I have just tried to install your module Ari Data Tables on my localhost server, but I got the following errors:

Notice: Undefined variable: row in C:\Program

Files\EasyPHP5.2.10\www\mysite\libraries\joomla\installer\adapters\module.php on line 252

Notice: Trying to get property of non-object in C:\Program

Files\EasyPHP5.2.10\www\mysite\libraries\joomla\installer\adapters\module.php on line 252

Fatal error: Maximum execution time of 30 seconds exceeded in C:\Program

Files\EasyPHP5.2.10\www\mysite\libraries\joomla\filesystem\folder.php on line 286

I am using Joomla 1.5.15 and EasyPHP 5.2.10 as server.

Please let me know what can be done to install this properly.

Hello,

This error occurs because "max\_execution\_time" PHP setting has less value than requires for installing the extension. You can install PHP Settings plugin that increase this value or you can install the extension from directory. For this unzip module on your server, open installation page and choose 'Install from Directory' option.

Hi,

Thank you for your quick reply.

I have succeeded to install ARI Data Tables, but now I don't know how to use it. Do you you have a step by step tutorial? I want to insert a data table in an article and virtuemart product description.

OK, can I upgrade from ARI Data Tables to ARI Smart Content: DataTable Pack just by paying the difference?

In readme.txt file which comes with the extension package you can find the following message:

"Detailed instructions how to use module and plugin you can find in 'Description' field on module or plugin settings page."

In other words, open the module and see 'Description' field. It contains instructions how to configure and use the

---

extension. If you want to embed a data table to an article, install 'Content - ARI Data Tables' plugin. Currently the extension can use in module positions or in Joomla! articles, but if you want to use it in any content, for example VirtueMart content, we can develop a plugin which helps to do it.

This upgrade can be done, but take into account 'ARI Smart Content: DataTable Pack' is under ARI Soft license and you can use the component only for one domain, each new domain requires new license key and 'ARI Data Tables' module provides user friendly interface for configuring data tables. If you interested in the upgrade, contact us by email, please.
