
CSS Documentation

Posted by ipv12 - 2016/01/03 10:50

Hello,

is there any Documentation for the CSS-Classes? I could find it on your Website nor at the Forum (with search) so i ask for Help...

Thx,
Tom

Hello,

Could you specify what widget do you use ("ARI Data Table", "ARI Table Sorter" and etc.) and what do you want to change?

Regards,
ARI Soft

Hello,

Just all of it ;)
for example i need different colors for the alternate lines. Or if it is possible to change the Color of one row.

I see you help many ppl with there needs but if you have a documentation for your css/variable definitions it would be easier for some of us... Thats all ;)

Thanks in Advance,
Tom

If want to use some styles for specific columns/rows, set "Advanced styling" parameter to "Yes" in module settings. Each row (element) will have the following CSS class:

ari-tbl-row-ROWNUM

Where ROWNUM is row number. For first row it will be ari-tbl-row-0, for the second row will be ari-tbl-row-1 and etc.

Each column (element) will have the following CSS class:

ari-tbl-col-COLNUM

Where COLNUM is column number. For first column it will be ari-tbl-col-0, for the second column will be ari-tbl-col-1 and etc.

:nth-child() CSS selector can be used to define styles for odd and even rows.

Regards,

ARI Soft

You didn't ask me, but for CSS you should use Firebug <https://addons.mozilla.org/en-US/firefox/addon/firebug/>

That way you can see what classes are attached to each element of your live website AND change them in real time to test various values.

Hope that helps.
