
Number of rows to display

Posted by umbris - 2016/01/07 20:05

It seems that no matter what number I enter into the "Number of rows to display" field, exactly 10 rows are displayed, except when I enter a number that is greater than the number of rows in the raw data.

I am using CSV file, ARI Data Table, Using jQuery UI themes. Using paging=yes, paging list=no, Pagination type=Next/Prev.

Thanks in advance for your help.

Hello,

Check that value which you use in "ARI Data Table -> Number of rows to display" is added to "ARI Data Table -> Choose custom paging mode -> Simple -> Custom pagination" parameter.

Regards,
ARI Soft
