
Cant sort data table

Posted by eoltra - 2016/02/21 01:56

Hello

I have a table with almost 2500 records that i need to show. But i cannot figure out how to sort the value correctly. I ve tried different ways but i cannot understand how does sorting the columns work correctly.

Im using decimal values...

Hello,

Do you show from a database or a CSV file? What value of "Use server side pagination" parameter from module settings?

Regards,
ARI Soft

I show it from database using sql query.
i have turned of the value of server side pagination.

If server side pagination is used then data is stored on database side. If it is stored like 0.70% in a database then it will be sorted as string because it is not a number.

Ok but im not using server side pagintation. Also the value si not stored like 0.70%. I used your format option to add the %. The value is stored as 0.70.

Set "Choose table type -> ARI Data Table -> Columns settings -> Column index" parameter to 2 and "Choose table type -> ARI Data Table -> Columns settings -> Sorting type" parameter to "Numeric HTML" value.

Regards,
ARI Soft
