
Detail page

Posted by adolcini - 2016/03/26 11:40

Hi,

I bought Ari Tables and I'd like to show a table with 3 column (fields) but I'd like to click on the line on my interest in order to see the other details about that line (as a pop up or a new windows).
Is possible ? how can I do that ?

I'm using a CSV file as data source.

Thanks
Andrea

Hi Ari Tables,

I read your post the point is that I have only one CSV file with 10 column, I want to show 3 column and when I click on a line I want to see the other information.

I read your post and your example

SELECT

*

FROM

tbl

WHERE

CatId = {\$REQUEST:categoryId}

...but If I choose CSV option I have no possibility to insert any SQL code.

How can do that ?

thanks
Andrea

"CSV -> Filters" parameters section can be used for CSV files. For example if want to filter data from a file by "categoryId" request variable in "CatId" column, set "CSV -> Filters -> Column Name" parameter to CatId value, "CSV -> Filters -> Operator" to "Equals" and "CSV -> Filters -> Value" to {\$REQUEST:categoryId} value.

Regards,
ARI Soft

Hi Ari Soft,

may be I didn't explain well what I want to do, because I used the filter as you suggest to me but this doesn't work.
the situation is that

- 1) I have a CSV files with 8-10 columns
- 2) As first step, I want to show you only the first 3 columns
(I'm able to do These steps)
- 3) I want to click on a line
- 4) I want to open a pop up in order to see the other fields of that line
(steps 3 and 4 I'm not able to do that)

The attached picture should explain my goal.

Pls Let me know if is it possible.

Thanks in advance

Hello,

It can be done if create two module instances, one for main table and another for secondary table (with details about the selected row) and send a request variable (row ID) to secondary table. This solution is described here.

Regards,
ARI Soft

Re:Detail page

We can help to configure the extension, if you provide a temporary access to your J! backend by email and provide a link to a page where the main table is shown.

Regards,
ARI Soft

Hi ARI Soft,

I sent a mail direct let me know if you don't receive it or I have to fill this quick reply box.

Thanks
Andrea

We configured the module. When click by a link in "CodiceAnalita" column, a popup with secondary table is opened.

Regards,
ARI Soft

Thanks.
It's exactly what I needed.

Best Andrea
