
Show image in table row

Posted by Duffman_DK - 2016/03/30 22:07

Hi Ari Soft

Bought the Data tables, and it works great!

Is it possible to show an image in a table row?

The path to the picture is in the database, and is in a varchar column.

I have tried to manually edit the html in the browser inspector, and the output looks ok.
But i wonder if there is a better way?

Regards

Hello,

"Columns settings -> Format" parameter can be used for this purpose. For example if URLs to images are store in img column, set "Columns settings -> ID" parameter to img value and populate "Columns settings -> Format" parameter with the following value:

It works!

Thx :)
