## formatting table and displaying images

Posted by suzee@goldencrossings.com - 2016/04/27 15:23

---

UPDATE: I was able to get the image to show in the table. So #2 is SOLVED.  
I have not been able to get the Theme to show up.

-----

Hello. I just purchased your table extension and have a couple of questions.

- 1) jQuery UI Theme : How do you use these? I've selected a theme, but the display doesn't change on the front end.
- 2)SOLVED I have a field containing the path to an image file. I want to show the image in the table. I tried the following from one of the posts, but it does not display the image so.

-----

"Columns settings -> Format" parameter can be used for this purpose. For example if URLs to images are store in img column, set "Columns settings -> ID" parameter to img value and populate "Columns settings -> Format" parameter with the following value:

-----

Being new to this extension, I'm sure that it is just user error.

thanks for your help!

- Hello,
1. jQuery UI themes can be used by "ARI Data Table" widget (when "Choose table type" parameter is set to "ARI Data Table") if "Choose table type -> ARI Data Table -> Using jQuery UI themes" parameter is set to "Yes".

Regards,  
ARI Soft
