## How many Modules can i show in my web? - ARI Data

Posted by gegome - 2016/05/31 18:27

---

Hi, is it possible have more than one connexion (database) in my web?, i mean, i have two or N database and i want to connect for example, two database differents, Can i do it? If that is true, how can i do it?  
Thanks a lot.

:unsure:

Hello,

Joomla! supports ability to create as many module instances as you want. For this use "New" or "Duplicate" buttons on "Extensions -> Modules" page on Joomla! backend. It is possible to use different connection parameters In different module instances. For this use "SQL -> Load data form -> External database" parameters section on module settings page.

Regards,  
ARI Soft
