Aridata module labels

_____

Hi,

UPDATE - I upgraded my installation the latest version and this problem is resolved. Please close / delete this topic. Thank you!

I've been using aridata tables for a while now with no problems. My question is how to fix the module labels. I think it has something to do with the language file, but I'm not sure. Can you assist?

Please see attached screenshot.

Hello,

Install the latest version of the extension. It is available in "Member Area" on our site.

Regards,
ARI Soft
