One table with selection

Posted by adoewa - 2016/09/03 07:19

_____

Hi all,

I have one big table with data.
I made different modules to show the data from that table with

SELECT Code,State,Name,2M,6M,10M,12M,15M,17M,20M,30M,40M,80M
 FROM `WA_TBL` WHERE DXCCID=227 ORDER BY State

In every module the DXCCID is different.

Is there a way that i can use a pulldown selection to select the different DXCCID's.
So i need only one module.

==

_____

Hello,

It is possible to use request variables in "WHERE" clause of SQL query. For example if want to use "id" request variable, a query will look like:

SELECT
 Code,State,Name,2M,6M,10M,12M,15M,17M,20M,30M,40M,80M
FROM
 `WA_TBL`
WHERE
 ({$REQUEST:id|empty:''} = '' || DXCCID={$REQUEST:id|empty:''})
ORDER BY State

Regards,
ARI Soft
