
[SOLVED] Help, stuck on a basic SQL query

Posted by vladimir84 - 2016/09/08 08:56

Hello.

Can you please point me to some documentation on how to use this plugin?

I bought it to use it almost exclusively for MySQL, and I can't seem to get any heads or tails on how to use it.

This is what I get as a graph:

<https://s11.postimg.org/cuh266tdb/Capture.jpg>

I used this query with another free plugin (plotalot) and it worked the way it was supposed to:

```
SELECT
CONCAT(year(calendar.datefield),'-', LPAD(month(calendar.datefield), 2, '0')) AS ymonth,
IFNULL(count(con_inizio_contratto),0) AS assunti,
year(calendar.datefield) AS anno,
month(calendar.datefield) AS mese,

IFNULL(count(con_licenziamento_data),0) AS licenziati
FROM datipersonali RIGHT JOIN calendar ON (DATE(datipersonali.con_inizio_contratto) = calendar.datefield)
WHERE (calendar.datefield BETWEEN
(SELECT MIN(DATE(datipersonali.con_inizio_contratto)) FROM datipersonali)
AND
(SELECT MAX(DATE(datipersonali.con_inizio_contratto)) FROM datipersonali))
GROUP BY year(calendar.datefield), month(calendar.datefield), ymonth
```

This is what I am supposed to get:

Please help me!

Hello,

Set "Choose source type -> SQL -> Revert data" parameter to "Yes".

Regards,
ARI Soft

Thank you for the quick reply. Unfortunately, now it gives me this:

<https://s14.postimg.org/q6vg04aot/Capture4.jpg>

It doesn't hide the year and month column (in spite of the fact it was selected as hidden

here:<https://s15.postimg.org/yqh4mt0w7/Capture10.jpg>), and I have to have them in the query in order to sort the data.

Please tell me how to fix it.

Could you provide a link to a page with the chart?

Regards,
ARI Soft

Remove "anno" field from fields list in "SELECT" SQL query. You can use it directly in "ORDER BY" clause if need this to sort data.

PS: When "Revert data" is set to "Yes", "Columns settings" parameters are applied to transformed table. It doesn't contain "anno" column, it contains "2011-06", "2011-07" and etc. columns.

Regards,
ARI Soft

Re:Help, stuck on a basic SQL query

Ok, thank you, that did the trick, however the custom labels aren't working when the Revert is enabled. Take a look:

<https://s21.postimg.org/g001uta7n/Capture67.jpg>

this is the result:

<https://s22.postimg.org/7f8encfql/Capture68.jpg>

As we wrote in our previous, the extension works with transformed table when "Revert data" is enabled. Alias can be set in SQL query. For example:

```
SELECT
id AS `Product Id`,
YEAR(C.created) AS `Created at`
...
```
