
[SOLVED] Pie chart shows only one column

Posted by vladimir84 - 2016/09/08 11:05

<https://s14.postimg.org/4g6o7k9cd/Capture1111.jpg>

I'm trying to do a split between male/female and this is my query:

```
select
```

```
count(case when datipersonali.id_uomo_donna='1' then 1 end) as Uomini,
```

```
count(case when datipersonali.id_uomo_donna='2' then 1 end) as Donne from datipersonali
```

```
where datipersonali.con_stato = '1'
```

it only shows the first column as 100% and only one in the legend.

what am I missing here?

Use the following SQL query and set "Revert data" parameter to "Yes":

```
SELECT
```

```
'Count',
```

```
COUNT(case when datipersonali.id_uomo_donna='1' then 1 end) AS Uomini,
```

```
COUNT(case when datipersonali.id_uomo_donna='2' then 1 end) AS Donne
```

```
FROM
```

```
datipersonali
```

```
WHERE
```

```
datipersonali.con_stato = '1'
```
