
[SOLVED] Total row in table below the chart

Posted by vladimir84 - 2016/09/12 07:24

Good morning :)

I need to add the total number as the last row of the table below the pie chart like on the picture below:

<https://s18.postimg.org/fv12x2k39/totali2.jpg>

This third row shouldn't be taken as another column by the pie chart.

I need this also for the table below the column chart. How do I do that?

Hello,

It is possible to use one instance of "ARI Data Tables" module to show a chart (set "Hide table" parameter to "Yes") and another module instance to show only table with values. For module instance which is used to show table use "UNION" in select SQL query to add "Total" row.

Regards,
ARI Soft
