

Filters for the columns in Table sorter

Posted by vladimir84 - 2016/09/12 12:51

How do I put filters for each of the columns above the Table sorter, like in the demo, where you placed the theme sleector?

Hello,

Set "ARI Table Sorter -> Filterable" parameter to "Yes".

For "ARI Data Table" widget use "Show search input" parameter.

Regards,
ARI Soft

Yes, it shows one search field for the whole table. I need a filter that is going to show me only the selected value in the column.

Take a look at this table:
<https://s22.postimg.org/u02vx4kf1/columns.jpg>
if I write tessitura, it will show me the "reparto"->tessitura that I want, but also the Controllo qualit  that I don't want, simply because there is a "tessitura" mentioned in the second column.

Ho can I have a selector, like "Show 10 entries" but for data in the table?

It is not supported.

It's a pity. Maybe in the next release you could implement something like that?

I have an idea, I will make a query, like the one that uses the {REQUEST} from the article, and as the "All" setting I can put all the ids for the first column, but it will take me a long time.
