Decimal comma (,) instead od point(.) in table

Posted by vladimir84 - 2016/10/06 07:28

_____

I'm using ARI Data table as the table, and the results show the numbers with (.) for decimals. I need them to be commas (,) (European format). Also, I will need thousands to be points (.) and not commas (,)

This is currently the result (on joomla article and excel export):
1,100.00
I need this:
1.100,00

I already tried CONVERT(value, DECIMAL(10,2)) but it has no effect. In the database it's formatted correctly

_____

Never mind, I found it: FORMAT(value,2,'de_DE')
And yes, you have to use the German code. I tried using the Italian one and it didn't work.
